Objectives:-

The main objectives of the FDP are:

- 1) Industrial Safety is needed to check all the possible chances of accidents for preventing machine and material as it leads to the loss of whole establishment.
- 2) It is needed to eliminate the accidents causing work stoppage and production loss.
- 3) It is needed to prevent accidents in industry by reducing any hazard to minimum.
- 4) It is needed to achieve better moral of the industrial employees.
- 5) It is required to have better human relationship within the industry

Outcomes:-

- 1) Analyze the effect of release of toxic substances
- 2) Understand the industrial laws, regulations and source models.
- 3) Apply the methods of prevention of fire and explosions
- 4) Understand the relief and its sizing methods.
- 5) Understand the methods of hazard identification and preventive measures.

About Faculty Development Program:-

We will train our faculty to respond to any number of injuries or accidents ranging from amputations, burns, falls fractures, heart attacks, and strokes. Our training institute is custom tailored to specifically meet the needs of your organization whether you are an industrial plant, factory, and office or distribution facility.

Faculty development programs help teachers understand how to build positive relationships with students, provide timely and constructive feedback, and create a supportive learning environment. This, in turn, leads to increased student satisfaction as they feel more valued and understood in their learning journey.
